

**METHOD AND SYSTEM FOR EXCHANGING SENSITIVE  
INFORMATION IN A WIRELESS COMMUNICATION SYSTEM**

5

**ABSTRACT OF THE DISCLOSURE**

Improved techniques that enable the exchange of sensitive information between client devices and server devices are disclosed. The exchange, as well as the use and nature, of sensitive information released can be governed by one or more privacy agreements established between the principle parties, namely, a client device and a content server. A proxy server can be used to establish privacy agreements with content servers (service providers).
